Agenda

Question from DNJ during presentation: spam prevention?
- limit on sending same template
    - limit of 5?
    - how should we limit sending the same email multiple times? once the mailto link gets opened the user can do whatever they want with it
        - IP tracking
            - more robust
        - session/cookie tracking or track on frontend
            - can refresh the page to get around it
        - captcha?
- limit on recipient bundle size
    - prevent people from adding thousands of recipients and have it look like one
        - limit of 20?
    - display how many emails are in the bundle on the front-end?

FP milestone – is there any feedback or problem from the MVP we are missing or need to address, and is there anything else we should add or keep in mind? Brief summary of FP goals below:
- Recipient bundles + contacts page
- Default ordering of templates on the front page
    - Last modified?
    - Don't want to do views or something similar to encourage "clout-chasing"
- Insights (visible to author of template to see what impact their template is making)
- Comments
- Smarter location filtering
- Bootstrap initial dataset – create a campaign

Changes to project plan

Location filtering refactor and recipient bundles moved back to FP

Achieved/missed milestones and progress

- MVP milestone:
    - all of the goals were met
    - some kinks in authentication to iron out for the FP
- FP milestone progress:
    - started on recipient bundles and contacts
